⁽¹⁾ Represents the percentage of TD Variable Interest Rate Mortgages (TD VIRM) where the customer's contractual payment is no longer sufficient to cover the interest owed. With TD VIRMs, the customer's contractual payment amount will remain the same as the TD Mortgage Prime Rate changes. Any interest that is not covered by the contractual payment is then added to the customer's principal amount and the customer's amortization period will increase unless the customer takes action to make the mortgage amortizing again (e.g. makes a lump sum principal payment or increases their contractual payment amount).

Indexation Methodology

As of the date of this Investor Report, the Guarantor uses the following methodology to determine indexed valuations for Properties in the Covered Bond Portfolio for reporting as of a date on or after January 1, 2018 (the "Indexation Methodology") for purposes of the following: (a) the Asset Coverage Test, (b) the Amortization Test, (c) the Valuation Calculation and (d) for other purposes required by the CMHC Guide. Changes to the Indexation Methodology may only be made (i) upon notice to CMHC and satisfaction of any other conditions specified by CMHC in relation thereto, (ii) if such change constitutes a material change, subject to satisfaction of the Rating Agency Condition, and (iii) if such change is materially prejudicial to the Covered Bondholders, subject to the consent of the Bond Trustee. The Indexation Methodology must at all times comply with the requirements of the CMHC Guide.

To determine the current market value of a Property, the Guarantor uses the Teranet-National Bank House Price Index™ (the "HPI Index") and the Teranet - National Bank City House Price Indices™ (the "CHPI Index", and together with the HPI Index, the "Indices"). At this time, the Property value is calculated using the CHPI Index available for the following eleven Canadian metropolitan areas: Alberta-Calgary, Alberta-Edmonton, British Columbia-Vancouver, British Columbia-Victoria, Manitoba-Winnipeg, Nova Scotia-Halifax, Ontario-Hamilton, Ontario-Toronto, Ottawa-Gatineau, Quebec-Montreal, Quebec-Quebec City and the "Composite 11" HPI Index for all other cities outside of the above listed metropolitan areas. The "Composite 11" HPI Index combines the aforementioned eleven Canadian metropolitan areas to form a national composite index.

Further details on the Indices including a description of the method used to calculate the Indices is available by subscription at <https://housepriceindex.ca/>

A three step process is used to determine the current market value for each Property subject to the Related Security in respect of the Loan. First, a code (the Forward Sorting Area) which identifies the location of the Property is compared to corresponding codes published by Canada Post that groups properties into the areas covered by the Indices. Second, the rate of change for the applicable area is used to calculate a house price index factor (the "HPI Factor"). In order to calculate the applicable HPI Factor, if the Property is located within an area covered by the CHPI Index, the applicable CHPI Index will be used based on the city mapping assigned in parenthesis above and if the Property is located outside of the metropolitan areas covered by the CHPI Index, the "Composite 11" HPI Index is used. Finally, the current market value is then determined by adjusting the original valuation for such Property, by applying the corresponding HPI Factor from the date of the original valuation to the date on which the latest valuation is being adjusted for purposes of determining the current market value for such Property. In instances where the original valuation in respect of such property pre-dates the first available date for the relevant rate of change in the Indices, the nearest available date within two months for such rate of change is used to determine the rate of change to apply to adjust the latest valuation for purposes of determining the current market value for such Property. The process is repeated at least quarterly.

Material risks associated with using the Indexation Methodology include, but are not limited to, the accuracy and completeness of the Indices being used, the continued availability of the Indices, the risk that the Indices do not account for differences in property value changes based on property type, and, in the case of Properties located outside of the areas covered by the CHPI Index, the risk that the "Composite 11" HPI Index may not accurately capture unique factors affecting local housing markets.
